[+49 1573 2484973](tel:+4915732484973)

## Skills

**Proficient:** TypeScript, JavaScript, C#, React, Node, Vue, HTML, CSS3, Express, Visual Studio Code, ASP.NET MVC, SQL Server

**Exposure:** GraphQL, Python, Redux, Docker, Jest, Kotlin, Spring Boot, PostgreSQL, Webpack

## Experience

**Full Stack Software Engineer** | Jimdo

Hamburg, Germany | 06-2020 - Present

- Worked most of the time in the Frontend, using React and technologies like NextJS, Redux and others to contribute to multiple codebases such as the Store, CMS, Wizard and more.
- Implemented the autofill functionality for the Store PayPal integration, so business users could choose to pre-fill as much data as possible for their integration. I worked directly with our Python + Flask Backend and our React Frontend.
- I created the MVP for a Live Preview of our Website Creation Wizard, using React + Redux. This effort opened up new possibilities for our Product teammates, and we proceeded to polish and implement it as an A/B test. This project motivated the team and set our approach for future projects.
- I am currently leading the development effort of a new Jimdo product as the only full-time engineer. Our Backend is made with Kotlin + Spring Boot and interacts with other services from the company via Kafka. And our Frontends are made using NextJS, a React framework.

**Freelance Software Engineer** | Techona

Prague, Czechia | 05-2019 - 12-2019

- Developed casino games using an internal JavaScript framework based on PixiJS.
- Implemented “re-skins” for two new games, changing the UI of existing games to fit a new theme.
- I created a bulk project management tool that worked inside a spreadsheet. I used VSTO with C#, which interacted with the Jira REST API. It reduced the time needed to create new re-skins Projects in Jira from days to minutes.

**Software Developer** | The App Master

Buenos Aires, Argentina | 07-2018 - 08-2019

- I designed and implemented the re-engineering of Plateanet’s ticket management platform, along with another developer. The project consisted of the Back Office, REST API, and the Point of Sale services. We used ASP.NET Core, AForge, JQuery and VueJS, among other technologies. Now Plateanet sells 20 million tickets per year throughout more than 130 points of sale on top of this platform.
- I introduced CI/CD to the company with a simple Jenkins implementation, which improved our project’s release time by 90%, compared to the old FTP release process.

**Software Developer** | Hexacta

Buenos Aires, Argentina | 08-2017 - 07-2018

- Part of one of the near-shore teams for CorVel Corporation, a risk management software company based in the United States of America.
- I worked on optimizing the performance of SQL Server Stored Procedures that dealt with hundreds of thousands of rows of data. By replacing cross-applies and cursors with more efficient alternatives, the times went from an average of 12 minutes to just 9, a 20% improvement.

**Software Developer** | Freelancer

Remote, Venezuela | 01-2017 - 07-2017

**Software Developer** | GIGA IT

Remote, Venezuela | 06-2016 - 05-2017

**Junior Software Developer** | Norkut

Nueva Esparta, Venezuela | 04-2014 - 06-2016

## Education

---

**BSc Informatics Engineering** (*Ingeniería de Sistemas*)

UNIMAR | Venezuela | 2010 - 2015

## About Me

---

**Hi there!** I am Victor. I have loved anime since I was 12 and good books since I was 14. My favourite anime is One Piece, and my favourite book series is The Wheel of Time.

In recent years I started to get into Skateboarding and Climbing. I enjoy the feeling of surpassing my previous self.

I am from Venezuela. And have lived in Argentina, Prague and now Hamburg. My dream is to travel across the world!

I hope you liked my profile! And that you have a great day! See you soon ;)
