PERSONAL STATEMENT

I'm a 23 years old Software Developer from Venezuela. I am constantly coming up with ideas and programming is my mean to make them true. I call myself an "Imaginary Founder", and work hard to remove the "Imaginary" part of the title.

I have 3 years of experience working on a consultancy company and as a freelancer. Now my goal is to become a founder, create my own startup and groom it into a successful company. But I am a methodical person and know that it's not easy, thus I make baby steps and lay a solid foundation for my career and my future business' growth.

Right now I am very interested in working with startups and successful tech business, all with the goal of learning from the current players. I look for the whole experience, from taking the first steps into a startup to working in a fully functional one. Helping them to reach their goals will give me the experiences I need to reach mine.

Now you, dear reader, who knows my goals and ambitions. Hopefully you are willing to help me reach them, because you must know that the best professionals are those who have a clear goal and are willing to work hard to reach it. If your are an employer I hope to hear from you and have the chance to talk about our goals and how I could help you reach yours. If you aren't, thank you for reading till here, hope you spread the word.
