Victor Catamo

Career Summary

Victor is a .NET Developer with over three years working in projects of various sizes and scopes. The tools he used the most is ASP.NET MVC along C#, but he worked too on WinForm, WPF, ASP.NET (WebForm), WCF and ASP.NET WebAPI, on the Backend Side. As a Web developer, he knows his way around FrontEnd technologies too, like ReactJS, AngularJS (v1) and JQuery. And can create beautiful and simple designs using CSS and HTML.

As a developer that worked on many projects of different companies, he knows how to adapt and learn from the way the team worked. This way he became knowledgeable of some Software Design Patterns like Singleton and Abstract Factory, for example. His goal when coding is to make the code as reusable and performant as possible.
